**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1, 2, and 5 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-27 of U.S. Patent No. 6,875,257 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the claim limitations of the application are disclosed in the patent.

Regarding claim 1, U.S. Patent No. 6,875,257 B2 discloses in the claim 20, a method for constructing a particle filter in a microelectromechanical system, the method comprising:

depositing and patterning a plurality of alternating layers of filter forming material and sacrificial material on a substrate material to form at least one filter bottom and at least one filter wall; and

removing the sacrificial material to release the at least one filter bottom and the at least one filter wall to define a particle trap between interfacing portions of the filter bottom and filter wall.

Regarding claim 2, U.S. Patent No. 6,875,257 B2 discloses in the claim 3 and 20, at least one filter bottom and filter wall are interconnected at least one support feature.

Regarding claim 5, U.S. Patent No. 6,875,257 B2 discloses in the claim 20-23, patterning the filter bottom into a predetermined one of a plurality of geometric configurations.

#### ***Allowable Subject Matter***

Claims 3, 4, and 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
